

Zellio: Token-X Screening Brief

Project Name: Zellio **Tagline:** Institutional-grade, compliance-first RWA tokenization engine for Southeast Asia and Islamic Finance.

1. The Vision

Zellio bridges traditional finance with global on-chain capital by providing a full-stack platform for tokenizing private credit and Shariah-compliant Sukuk. We are building the critical infrastructure needed to modernize capital markets in Southeast Asia, ensuring strict adherence to local regulatory frameworks.

2. The Problem

Institutional investors and asset issuers in Southeast Asia face significant friction when accessing on-chain liquidity. Existing tokenization platforms lack the necessary localized compliance integrations—specifically for Islamic Finance instruments like Sukuk—making it legally and operationally prohibitive to deploy real-world assets (RWAs) on-chain.

3. The Zellio Solution

Zellio is a compliance-first engine built explicitly for the unique regulatory landscape of the Malaysian capital markets and the broader region.

Key Capabilities:

- **Automated Compliance & Onboarding:** Integration with Bank Negara Malaysia (BNM) e-KYC standards, including MyKad validation and biometric liveness detection, ensuring strict AML requirements are met before any capital moves.
- **Shariah-Compliant Infrastructure:** Native support for tokenizing Sukuk (e.g., Green Energy Sukuk), adapting terminology (e.g., “Expected Profit Rate”) and embedding Shariah Oversight data directly into tokenholder protections.
- **Legally Enforceable Transfers:** Utilizing the ERC-3643 standard, all on-chain transfers must pass through our `ComplianceModule` and `IdentityRegistry`, physically preventing transfers to non-KYC’d wallets.
- **Localized Stablecoin Integration:** Utilizing MYRC (Malaysian Ringgit stablecoin) on the Base network to completely remove FX risk for local issuers and retail investors, aligning with BNM’s preference to avoid local currency displacement.
- **End-to-End Lifecycle Management:** An intuitive Issuer Portal allows for effortless spin-up of Sukuk SPVs and automated on-chain profit distribution via smart contracts.

4. Why Token-X?

Zellio aligns perfectly with Token-X’s mission to accelerate high-impact, institutional Web3 projects. We are seeking the accelerator’s strategic guidance to scale our operations, refine our go-to-market strategy for institutional adoption, and strengthen our partnerships within the broader blockchain ecosystem.
