

ZELLIO

Tokenize Private Credit. Unlock Global Capital.

The full-stack platform to issue, trade, and service
compliant security tokens for real-world assets.

Prepared by **aiman.eth** · May 2026 · Confidential

THE PROBLEM

\$10 Trillion in Private Credit is Locked Behind Paper.

Illiquid Markets

Private credit instruments have no secondary market. Investors are locked in for years with zero exit options.

Fragmented Infrastructure

Issuance, compliance, custody, and distributions are handled by 5+ vendors. Costs are prohibitive for emerging-market originators.

Excluded Investors

Accredited investors in SEA, LATAM, and Africa cannot access institutional-grade yields because of jurisdictional gatekeeping.

Result: Originators overpay for capital. Investors miss 12–22% APY opportunities. \$10T+ sits uninvestable.

THE SOLUTION

One Platform. Full Stack. Fully Compliant.

Zellio replaces fragmented vendors with a single protocol that handles the entire lifecycle of a tokenized private credit instrument.

SPV Factory & Issuance Engine

Issuers create legal SPV wrappers, configure token parameters (supply, maturity, yield, jurisdiction restrictions), and deploy ERC-3643 compliant security tokens in minutes.

On-Chain Identity & Compliance

KYC/AML via Sumsub, OFAC screening via Chainalysis, DID-based accredited investor credentials. Every transfer is compliance-gated at the smart contract level.

Permissioned Secondary Exchange

The first DEX purpose-built for security tokens. Only verified investors can trade. Real-time order book with institutional-grade matching.

Automated Yield Distribution

Smart-contract-driven coupon payments. On-schedule USDC distributions to verified holders. Full repayment tracking and audit trail.

MARKET OPPORTUNITY

RWA Tokenization is the Fastest-Growing DeFi Sector.

Zellio's Beachhead: Southeast Asia, LATAM & Africa

These regions have the highest private credit demand (12–22% APY) but the worst capital market infrastructure. Zellio bridges this gap by enabling cross-border tokenized lending with on-chain compliance.

PRODUCT ARCHITECTURE

Six Smart Contracts. One Unified Platform.

IdentityRegistry.sol

DID-based KYC registry. Stores verified investor claims on-chain. Gates all token interactions.

ComplianceModule.sol

Enforces jurisdiction rules, investor limits, holding periods, and transfer restrictions per asset.

CreditToken.sol

ERC-3643 security token with compliance-gated transfers, forced transfers, and pause capability.

SPVFactory.sol

Deploys legal-wrapper SPV contracts linked to each credit instrument. Configures parameters on creation.

PermissionedDEX.sol

Order-book exchange that only allows verified investors. Supports limit orders with compliance checks.

YieldDistributor.sol

Automates coupon and principal repayments in USDC to verified token holders on schedule.

Stack: Solidity · Foundry · ERC-3643 · OpenZeppelin · Ethereum / Polygon / Base / Arbitrum

BUSINESS MODEL

Revenue From Every Layer of the Stack.

Revenue Stream	Description	Target Rate
Issuance Fee	One-time fee per tokenized instrument deployment	0.5–1.0% of raise
Trading Fee	Per-trade commission on secondary market volume	0.10–0.25%
Yield Spread	Spread on automated yield distribution flows	5–15 bps
SaaS License	Monthly platform fee for issuer dashboard access	\$2K–10K / mo
Fiat On/Off Ramp	Commission on USDC ↔ Fiat conversions (Plaid integration)	0.5–1.0%
Compliance-as-a-Service	KYC/AML screening and DID credential issuance	\$5–15 per check

Unit Economics: At \$100M TVL with 8% avg yield, annual platform revenue = \$500K issuance + \$250K trading + \$400K yield spread + \$120K SaaS =
~\$1.27M ARR

CURRENT TRACTION

Live Product. Real Infrastructure.

Platform Built

- Full React frontend with institutional-grade UX
- 6 auditable Solidity smart contracts (Foundry)
- Live marketplace with real-time price feeds
- Plaid-style bank integration (US + Malaysia)
- Permissioned DEX with order book
- Automated yield distribution engine
- KYC/AML onboarding with DID issuance

Asset Classes Supported

- **Tokenized Equities** — NVDA, INTC, NIO, Ford, Plug
- **Tokenized ETFs** — KWEB, FXI, TQQQ
- **Private Credit** — Trade Finance, Invoice Factoring
- **SME Lending** — Emerging market microfinance
- **Property Receivables** — Real estate-backed instruments

Regions Targeted

- Southeast Asia (Malaysia, Indonesia, Philippines)
- Latin America (Brazil, Colombia)
- East Africa (Kenya)

COMPETITIVE LANDSCAPE

Zellio vs. Existing Players

Feature	Zellio	Ondo	Centrifuge	Securitize
Full-Stack (Issue→Trade→Yield)	✓	✗	Partial	Partial
ERC-3643 Compliance	✓	✗	✗	✓
Permissioned DEX	✓	✗	✗	✗
Emerging Market Focus	✓	✗	✓	✗
Fiat On/Off Ramp	✓	✗	✗	✓
Automated Yield Distribution	✓	✓	✓	Partial
Open Source Contracts	✓	✗	✓	✗
Self-Custody Wallet Support	✓	✓	✓	✗

Key Differentiator: Zellio is the only platform that vertically integrates issuance, compliance, trading, and yield for **emerging-market private credit** with full ERC-3643 compliance.

Land with Issuers. Expand with Investors.

Phase 1

Anchor Issuers

Onboard 3–5 originator partners in Malaysia, Indonesia & Brazil. Deploy first \$5M in tokenized credit instruments. Prove unit economics.

Q3–Q4 2026

Phase 2

Investor Network

Launch accredited investor onboarding at scale. Enable secondary trading. Integrate fiat on/off ramps for non-crypto-native allocators.

Q1–Q2 2027

Phase 3

Protocol Scale

Multi-chain deployment (Polygon, Base, Arbitrum). API-first platform for third-party integrations. Target \$500M+ TVL.

H2 2027+

TEAM

Built by Builders.

Aiman (aiman.eth)

Founder & Full-Stack Engineer

Solidity smart contract architecture, React frontend development, institutional UX design. Built multiple Web3 platforms across DeFi, RWA, and AI-agent infrastructure.

Hiring

Key Roles Open

- Head of Compliance & Legal
- Business Development (SEA)
- Senior Solidity Engineer
- Institutional Sales Lead

THE ASK

Pre-Seed: \$500K to Go Live.

Use of Funds

Category	Allocation
Engineering & Audit	40%
Legal & Compliance	25%
Business Development	20%
Operations & Infra	15%

Key Milestones

-  **Done:** Full platform built & functional
-  **Month 1–2:** Smart contract audit (Trail of Bits / OpenZeppelin)
-  **Month 3:** Legal entity setup (SPV structure, Labuan IBFC)
-  **Month 4–5:** First 3 originator partners live
-  **Month 6:** First \$5M in tokenized credit deployed
-  **Month 12:** \$50M TVL, \$500K+ ARR

Raising \$500K Pre-Seed · SAFE · \$5M Post-Money Cap

ZELLIO

The Future of Private Credit is On-Chain.
